

# AdvancedLive 10.0

## Understanding your panel

## What's new in release 10.0?

As the brains of your fire system, the fire panel is central to ensuring people and premises are fully protected.

You can now see all fire panels on your system via AdvancedLive. This not only makes it clearer if there are issues to address, but also gives you easy access to full panel history.

Coming soon, you'll also be able to use AdvancedLive to remotely control your fire panels when they are in alarm or fault. Control of your fire system, like all aspects of our product, will be user permission based.

### Release 10.0 brings you other benefits too:

A fire incident timeline now has more information including:

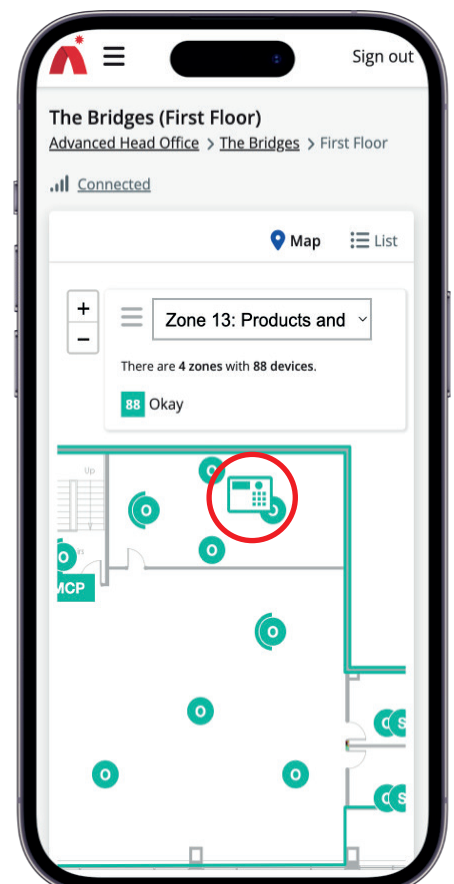

who has been notified

if/how the incident was viewed

any actions taken during the incident  
e.g. muting panels, silencing sounders, etc.

To experience the changes, log in to your AdvancedLive account, contact your sales representative or email [enquiries@advancedco.com](mailto:enquiries@advancedco.com)
