

AdvancedLive 3.0 is here!

What's new in release 3.0?

You can now access even more information during fire incidents.

The dashboard, accessed via text message, now includes an investigation delay countdown – this looks like the timer you see on your fire system if it's set up with an investigation/acknowledgement delay. Improved countdown visibility gives you maximum decision and response time before the system goes into full alarm.

You now also have an incident timeline for live viewing and post-event reviewing. You can follow developments closely and make safer, more informed decisions on the go, as well as analysing how events unfolded.

In addition, for full visibility and peace of mind, any status changes are now instantly sent by text alert ensuring you don't miss any further device activations, investigation delay start and end points or panel resets.

Latest features

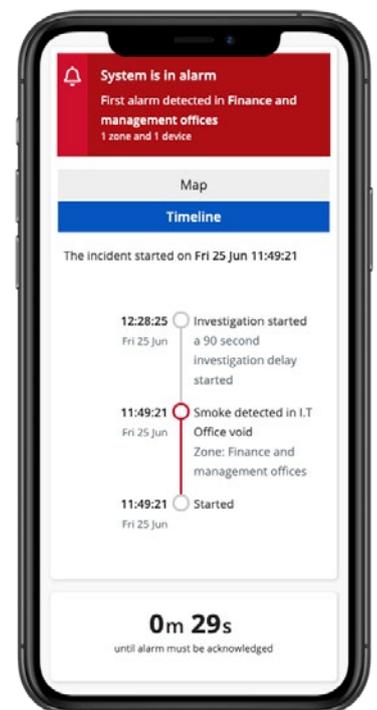

Dashboard view of investigation countdown – both first and second stage, depending on your fire system setup – for maximum response time

Intuitive timeline view of the fire incident, including types of detection

Status change alerts via text message during the incident – first and subsequent detections, investigation delay start and end points and reset actions

To experience the changes, log in to your AdvancedLive account, or to find out more, visit live.advancedco.com, contact your sales representative or email enquiries@advancedco.com
