

AdvancedLive 5.0

View your fire system your way

What's new in release 5.0?

You can now select how you view your fire system via AdvancedLive. Choose from map view, list view, or both during setup to best meet the needs of your site and facilities teams.

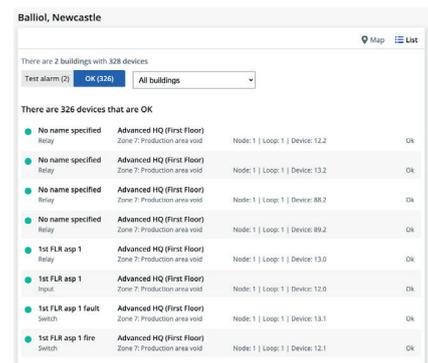

If you choose maps, you'll notice we've made some improvements so they're even more informative and easy to use.

In addition, we've introduced new features that allow single-person testing to help save you time. When a panel is in test mode, AdvancedLive now captures in real time when a device is being tested. This eliminates the need to have a second person waiting at the panel. AdvancedLive records the test date and time, so you can track your device test history and prove compliance.

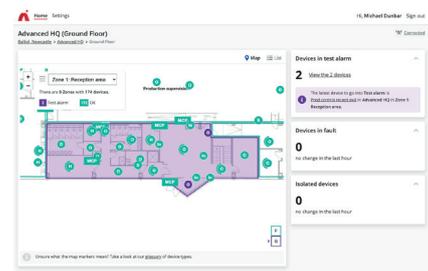

Release 5.0 lets you:

View your fire system as a list of devices – all the information you need, without the need to set up maps

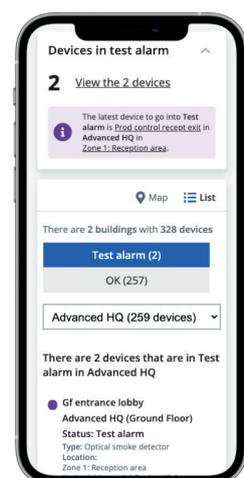

Enjoy quicker, easier testing of devices in alarm, with less scope for accidental activations compared with more traditional approaches

Check fire system status more quickly and intuitively thanks to clearer device icons and map labelling improvements

Benefit from performance improvements based on ongoing user feedback – for continued fire protection peace of mind.

To experience the changes, log in to your AdvancedLive account, or to find out more, visit live.advancedco.com, contact your sales representative or email enquiries@advancedco.com
