

Safe in Our Hands

Sprinkler systems are now mandatory in new UK care homes*

The MxPro 5 from Advanced offers a dependable compliance solution that's robust, versatile and quick to install.

Any new or existing MxPro 5 panel can be easily adapted to provide sprinkler indication and monitoring functionality.

And as ever with the MxPro 5, open protocol flexibility ensures compatibility with the leading wired and wireless device protocols.

Ideal for monitoring hundreds of sprinkler flow switches, the EN54-approved MxPro 5 offers:

- Up to 50 sprinkler zone indicators for fire and fault, with slide-in labels for easy identification
- Remote, real-time fire system management with AdvancedLive
- Building management interface option
- Keypad or key switch entry
- A choice of semi-flush or surface-mount and special colours/finishes.

Creating a safer future

*2025 update of Approved Document B (Fire Safety)

New-build care home?

Here's how we can help you comply with the regulations using the MxPro 5 range of panels when using loop-powered interfaces.

Simply choose the fire panel with the correct loop capacity that's right for your site. Then add the 50-zone, column format zone indication LED card which comes complete with slide-in labels. This means you can monitor the sprinkler zones via LEDs to indicate fire (red) and fault (yellow).

The 50-zone column format LED card, complete with slide-in labels, allows you to customise your sprinkler zones with text as required.

Part codes required	
Fire panel – choose one of these depending on the size of your site:	
MX-5101L	1 loop panel – large enclosure
MX-5201L	1-2 loop panel – large enclosure
MX-5401	1-4 loop panel – large enclosure
MX-5802	2-8 loop panel – extended enclosure
MXP-568	Additional loop card
Other parts required:	
MXP-513L-050CRY(F)* (25 Red & 25 Yellow)	50-zone LED slide-in labels to customise sprinkler zones with text for fire (red) and fault (yellow). Large enclosure.
MXP-513-050CRY(F)* (25 Red & 25 Yellow)	50-zone LED slide-in labels to customise sprinkler zones with text for fire (red) and fault (yellow). Extended enclosure.

(F)*= Fitted

Retrofitting an existing care home?

If you have an existing care home and want to comply with the new regulations, then we have a range of options for a quick and easy upgrade to your existing fire system.

Options include using our loop-powered solution or hardwiring the sprinklers directly back to the panel.

Please speak to your regional sales manager who will be able to advise you on the best solution according to the size and circumstances of your site.
